

# GLULAM- GLUED WOODEN BEAMS

*Glued wood construction solutions for your project.*

## INNOVATIVE BUILDING MATERIAL

Compared to other building materials, GLULAM is one of the strongest materials relative to its weight. This is the reason why GLULAM is sometimes called the new steel, mainly due to its flexibility and high strength.

Produced in LATVIA and delivered direct from the producer.

BALTFURU glued spruce or pine wood beams are produced in accordance with the European standard EN 14080:2013, as well as the strength standards GL24H, GL28H, GL30H.

The maximum possible dimensions of the beams.

↑ **1500mm** (Height)

→ **295mm** (Width)

↔ **13000mm** (Length)

## QUALITY

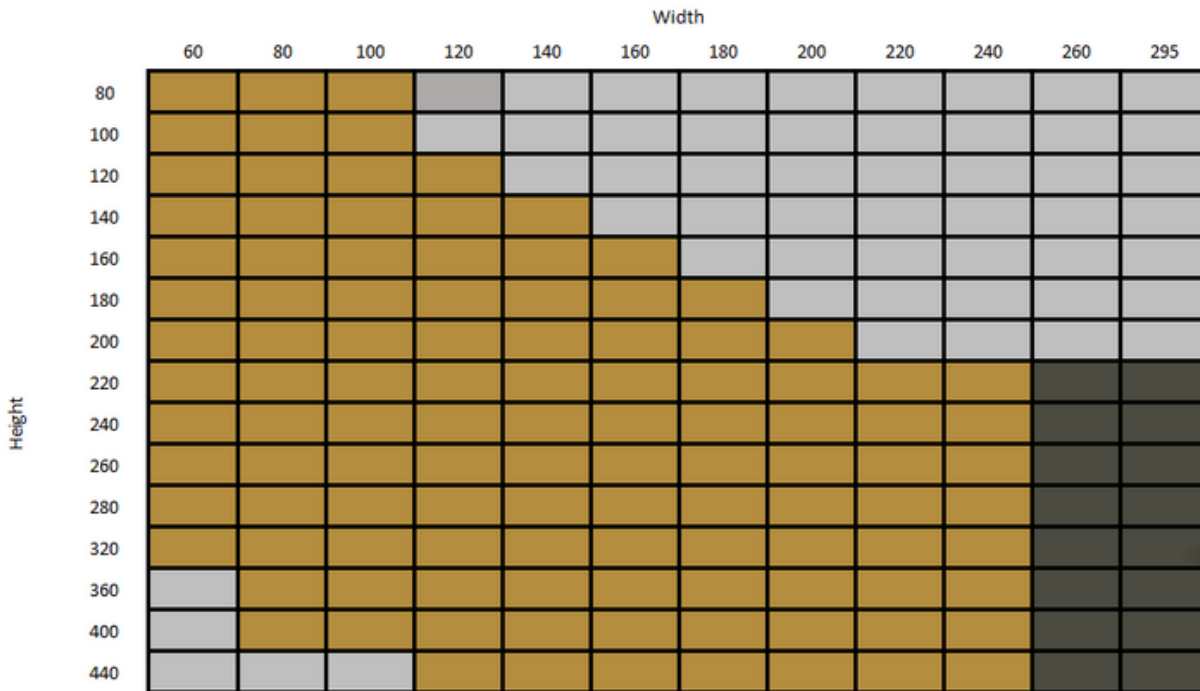

BALTFURU glued wooden beams are produced in strict compliance with full-cycle quality standards. All glued timber is produced only from certified C24 material. Certified polyurethane glue is used in the process of gluing the boards and the quality processes are monitored by BM CERTIFICATION.

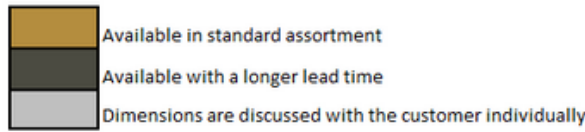

## INDIVIDUAL SOLUTIONS

Each customer is important to us. Therefore we provide an individual approach to the needs of each customer by providing the most suitable solution for each project.

If necessary, we make cuts, milling, connections and drillings for the screw locations. We can tailor the beams to the exact dimensions in length to save your time in the construction process. We offer painting, oiling or treatment with antiseptics on request.

Max Height 1500

## PRODUCTION DEADLINES

BALTFURU ensures exact deadlines, which are fixed with each customer individually before each order.

Orders with a beam length up to 6 m

Orders with a beam length over 6 m

### 3-4 weeks

### 4-5 weeks

Delivery to any European or Scandinavian country is possible.
